Market overview

Why invest in DIS

DIS' ESG

Appendix

# A modern, high-quality and versatile fleet.

	December 31 <sup>st</sup> , 2021							
DIS Fleet <sup>1</sup>	LR1	MR	Handy	Total	%			
Owned	5.0	8.0	6.0	19.0	51.4%			
Bareboat chartered	1.0	7.0	0.0	8.0	21.6%			
Time chartered-in long-term	0.0	9.0	0.0	9.0	24.3%			
Time chartered-in short-term	0.0	1.0	0.0	1.0	2.7%			
TOTAL	6.0	25.0	6.0	37.0	100.0%			

- DIS controls a modern fleet of 37.0 product tankers.
- Flexible, young and efficient double-hull fleet:
  - ✓ 76% IMO classed (industry average<sup>2</sup>: 44%);
  - $\checkmark$  An average age of the owned and bareboat fleet of 7.1 years (industry average<sup>2</sup>: 11.4 years for MRs and 11.5 years LR1s (25,000 -84,999 dwt));
  - $\checkmark$  78% of owned and bareboat vessels and 76% of the entire controlled fleet is 'Eco-design' (industry average<sup>2</sup>: 27%).
- Fully in compliance with very stringent international industry rules and long-term vetting approvals from the main Oil Majors.
- 22 newbuildings ordered since 2012 (10 MRs, 6 Handys, 6 LR1s), all delivered between Q1'14 and Q4'19.
- DIS' aims to maintain a top-quality TC coverage book, by employing part of its eco-newbuilding vessels with Oil Majors, which for long-term contracts currently have a strong preference for these efficient and technologically advanced ships. At the same time, DIS' older tonnage is employed mainly on the spot market.

DIS has a modern fleet, a balanced mix of owned and chartered-in vessels, and strong relationships with key market players.

# Rapidly declining CAPEX<sup>1</sup> commitments.

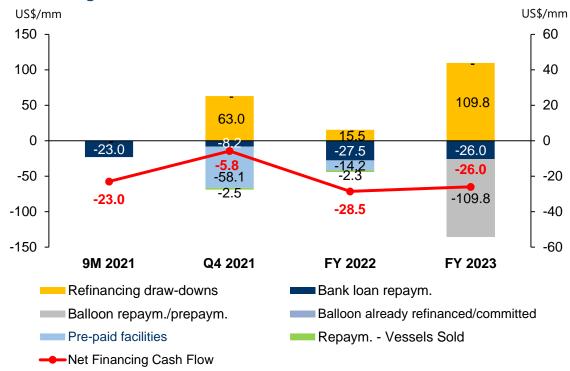

- DIS invested US\$ 924.4m from FY'12 to FY'19, mostly related to the 22 newbuildings ordered since 2012.
- **DIS has no remaining investments for newbuildings**, since the delivery of its last LR1 in Oct'19.
- Maintenance CAPEX from 2022 to 2023 is likely to fall relative to figures included in the graph above, as DIS sells some of its older vessels.

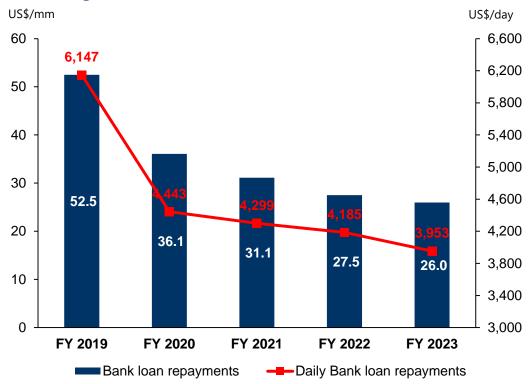

DIS' large investment plan, which led to an important renewal of its owned fleet, consisting now mostly of eco-vessels, was completed in Oct'19. DIS' Capex fell substantially in 2020 and 2021, with a further contraction expected in 2022.

# Lighter bank debt repayments and low refinancing risk.

Forecasted bank debt financing cash-flow (Excluding overdraft facilities)<sup>1,2,3</sup>

Daily bank loan repayment on owned vessels (Excluding overdraft facilities)<sup>1,2,3</sup>

DIS has refinanced all its '22 balloons. Since FY'20, DIS also benefits from significantly lower bank debt repayments, which will continue to fall over the next few years.

Based on the evolution of the current outstanding bank debt – with the exception of overdraft facilities.

Only balloon repayments are assumed to be refinanced. Some older vessels whose existing facilities' fully amortise during their respective terms (without balloons), are assumed to remain debt free therea Daily bank loan repayments is equal to bank loan repayments (excluding balloons), divided by owned vessel days.

# DIS' purchase options on leased vessels.

Vessel Name	Build Date	Purch. Option First Ex. Date	Purch. Obligation Date	First Ex. Option (In/Out of the money) <sup>1</sup>
High Priority <sup>2</sup>	Mar-05	Oct-19	Oct-22	Exercised in Q1'21
High Freedom	Jan-14	Feb-20	Feb-24	In the money
High Fidelity	Aug-14	May-20	May-27	In the money
High Trust	Jan-16	Jul-20	Jul-28	In the money
High Discovery	Feb-14	Sep-20	Sep-24	In the money
High Loyalty	Feb-15	Oct-20	Oct-28	In the money
High Trader	Oct-15	Dec-20	Dec-28	In the money
High Voyager	Nov-14	Apr-21	Apr-29	In the money
Cielo di Houston	Jan-19	Mar-24	Sep-25	In the money

DIS has flexible purchase options on all its bareboat-in vessels, allowing it to acquire all the vessels with three months' notice from the first purchase option exercise date. Based on today's depreciated market values and their respective first exercise prices, all of these options are "theoretically" in the money. One of these options (High Priority) was exercised in Feb'21 and seven additional options are already exercisable as of today.

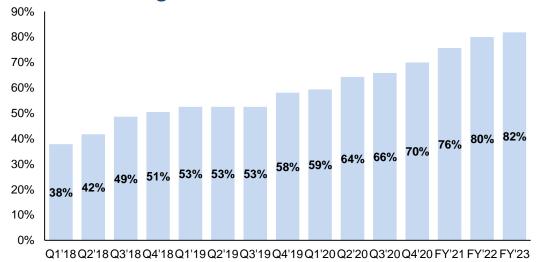

## Contracts and modern fleet to drive future results.

## Average TC and TC equivalent covered rates<sup>1</sup>

DIS' increasing % of 'Eco' fleet (based on all controlled vessels)

■% Eco vessels on total fleet at period-end

- After peaking in 2020, current contracts rates decline throughout 2021; the proportion of the fleet covered also falls gradually throughout the year.
- TC contracts allows DIS to:
  - consolidate strategic relationships with Oil Majors (Chevron, Exxon, Total, Saudi Aramco) and leading trading houses;
  - hedge against spot market volatility allowing DIS to secure TCE Earnings (Q4'21 US\$ 22.5m; FY'22 US\$ 52.9m; FY'23 US\$ 11.8m, are already secured as of today);
  - improve its Operating cash flow (TC Hires are paid monthly in advance).
- DIS aims usually for a TC coverage of between 40% and 60%.
- For'22, DIS has covered ~27% of its available vessel days at an average TC equivalent rate of US\$ 15,586.
- **DIS' percentage of 'Eco' vessels** was of only 38% in Q1'18, increasing to 76% in FY'21 and **expected to reach 80% in FY'22.**
- The eco percentage should rise even higher than indicated on the chart on the left, as during the next two years DIS is likely to sell some of its older vessels in a stronger market.
- An increasing percentage of 'Eco' vessels will increase DIS' earnings potential, given the premium rates achieved by these vessels.

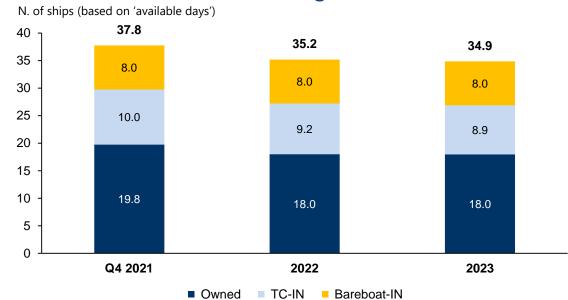

## Large potential upside to earnings.

## Estimated fleet evolution (avg. n. of vessels)<sup>1,2</sup>

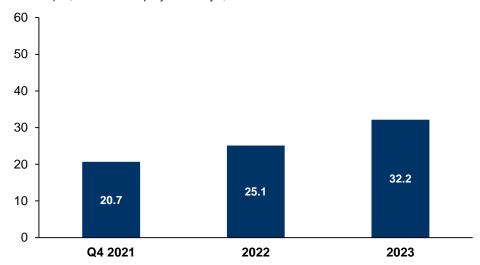

Based on DIS' estimated spot exposure, every US\$ 1,000/day increase/decrease in spot rates equals to:

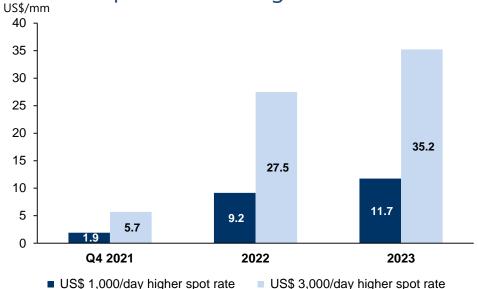

- US\$ 1.9m higher/lower net result and cash flow in Q4'21;
- US\$ 9.2m higher/lower net result and cash flow in FY'22;
- US\$ 11.7m higher/lower net result and cash flow in FY'23..

## Estimated spot exposure (avg. n. of vessels)<sup>3</sup>

N. of ships (based on 'employment days')

# Potential upside to earnings<sup>3</sup>

Average number of vessels in each period based on contracts in place as of today and subject to changes.

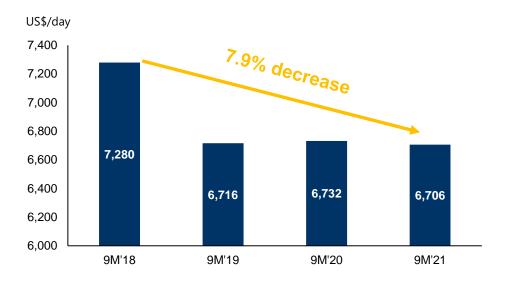

<sup>2.</sup> Based on total estimated 'available days'.

Based on estimated spot 'employment days' (i.e. net of estimated off-hire days).

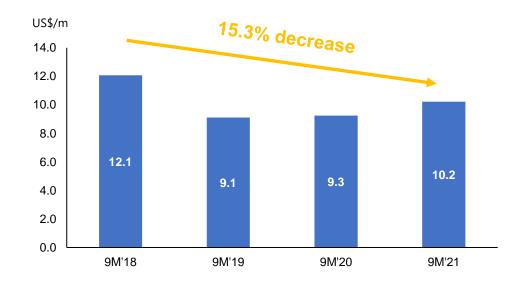

# DIS focused also on cost savings.

# Daily operating costs – owned and bareboat vessels<sup>1</sup>

#### General & administrative costs – total fleet

DIS has focused not only on increasing the top line but also on managing its vessels more efficiently, obtaining significant cost savings in the last years.

Operating costs in 2020 benefitted from some non-recurring effects linked to the Covid pandemic; currency effects also play a role in the 9M'21 increase in these costs.

# Strong balance sheet and liquidity position.

(US\$ million)	Dec. 31 <sup>st</sup> , 2020	Sep. 30 <sup>th</sup> , 2021
Gross debt	(532.0)	(497.6)
IFRS 16 – additional liabilities	(96.4)	(86.9)
Cash and cash equivalents	62.1	42.0
Other current financial assets <sup>1</sup>	4.7	3.3
Net financial position (NFP)	(561.5)	(539.2)
Net financial position (NFP) excl. IFR16	(465.2)	(452.3)
Fleet market value (FMV)	705.5	743.5
NFP (excluding IFRS 16) / FMV	65.9%	60.9%

- Net Financial Position (NFP) of US\$ (539.2)m and Cash and cash equivalents of US\$ 42.0m as at the end of Sep'21 vs. NFP of US\$ (561.5)m at the end of FY'20 and of US\$ (682.8)m at the end of FY'19;
- The NFP (excluding IFRS16) to FMV ratio was of 60.9% at the end of Sep'21 vs. 64.9% at the end of June'21, 65.9% at the end of Dec'20, 64.0% at the end of FY'19 and 72.9% at the end of FY'18. This improvement relative to 2018 is attributable to DIS' 2019 equity capital increase and to the Company's strong operating cash generation and additional vessel sales in FY'20. Despite the current challenging market conditions, vessel values showed signs of improvement in Q2'21 and gained further momentum in Q3'21, also due to the positive medium-term outlook for our industry.
- The sale of the High Venture in Q4 2021 and of the High Valor in Q1 2022, allowed DIS to further improve its liquidity position and deleverage its balance sheet.

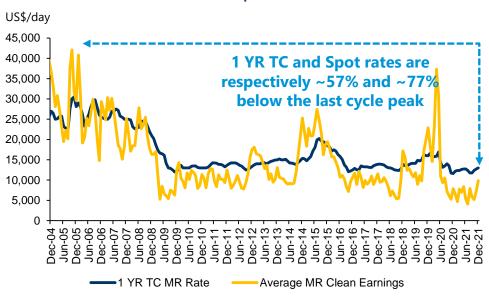

Despite a challenging market in the first 9M'21, DIS maintained a healthy financial structure as at the end of Sep'21, thanks to the deleveraging plan implemented in the last few years.

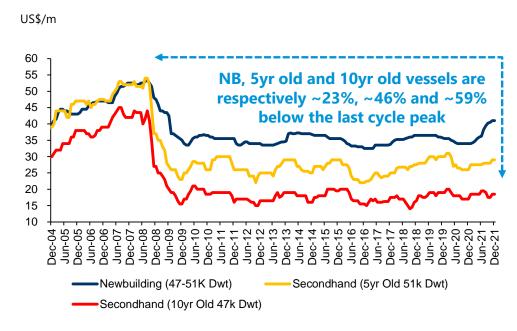

## Large potential upside to asset values.

## Historical MR TC and spot rates<sup>1</sup>

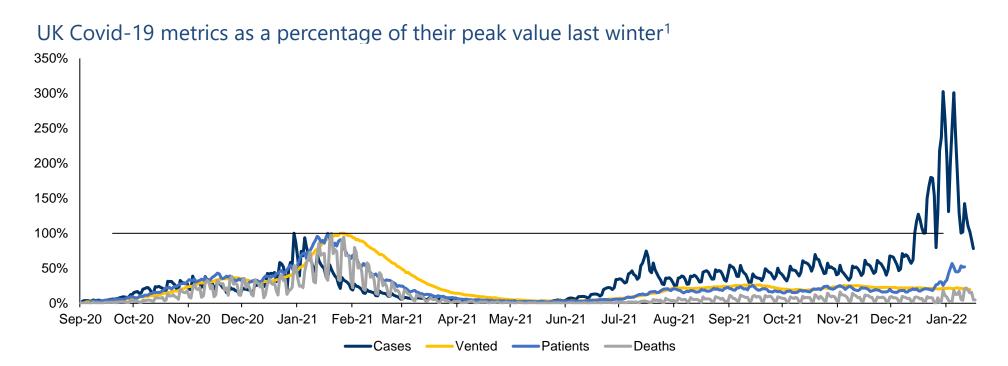

#### Historical MR asset values<sup>1</sup>

Current asset values are well below cycle peaks, providing a very attractive potential upside. Asset values have shown some signs of improvement already in the second part of 2021.

# E-MARKET SDIR CERTIFIED

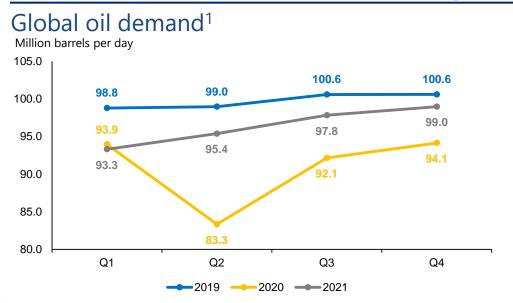

## Covid-19, the impact of the new variant.

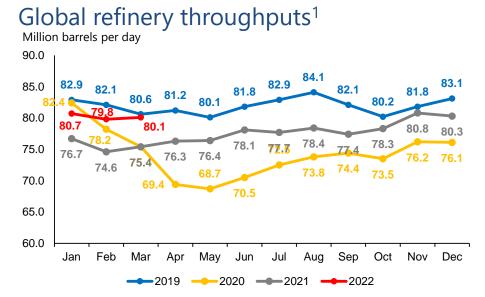

In the UK and several other European countries Covid-19 cases have been rising sharply in the last weeks, but the number of patients on ventilators as well as the number of deaths have increased much less so far. This seems to be the result of the vaccination campaign in addition to the Omicron variant being very contagious but much less lethal relative to some of the previous Covid-19 strains.

# Oil demand and refining throughputs recovering.

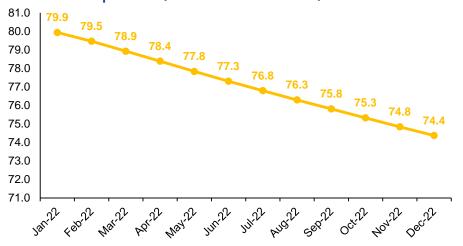

- In 2020, the reduction in oil demand linked to COVID-19 was unprecedented; according to the IEA, oil consumption, which was of 91.0m b/d fell by a record 8.7m b/d relative to the previous year. Nearly two-thirds of the decline occurred in the OECD, which was hit much harder by the Covid-19 pandemic.
- Despite the surge in new Covid cases global oil demand held up well recently. In its most recent January '22 report, the IEA therefore increased its oil demand forecast by 200 kb/d for both 2021 and 2022. Global oil demand is now forecast to have risen by 5.5 mb/d in 2021 (average of 96.4 mb/d), and to rise by 3.3 mb/d in 2022 (average of 99.7 mb/d), slightly overtaking 2019 levels of 99.5 mb/d.
- Refinery runs for '21 instead are expected to have risen by 3.2 mb/d on average in 2021, recovering just 42% of 2020's decline. In 2022, the growth is forecasted to accelerate to 3.7 mb/d, with an average of 81.2 mb/d for the year (81.6 mb/d in '19).
- Oil supply is also expected to surge in '22 by 6.2 mb/d with the United States, Canada and Brazil set to pump at their highest annual levels. Increases of course are also expected due to the unwinding of OPEC+ cuts (+4.4 mb/d). Such sharp increases could lead to an oversupply of oil this year.

A recovery in demand and refining throughputs is ongoing, with an acceleration anticipated this year.

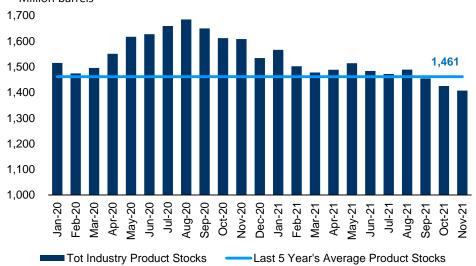

## Refined product inventories at low levels.

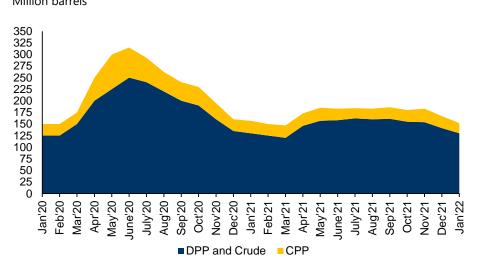

### Crude oil price (Brent, US\$ bbl), forward curve<sup>1</sup>

## OECD Industry Refined Product Stocks<sup>3</sup>

## CPP vs DPP and crude oil floating storage<sup>2</sup>

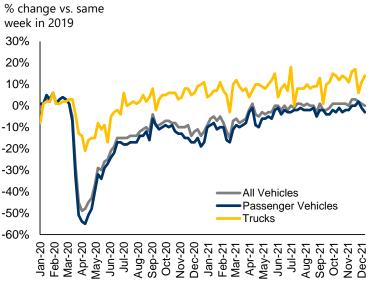

- OECD industry inventories of clean refined products have been declining rapidly and are now well below their 5-year average. Floating storage has also come full circle and after peaking at 75 million barrels in May 2020, has fallen sharply to 25 million barrels by the end of '20, holding at around the same level since.
- On 18 July '21, to keep the market better supplied as demand accelerates in H2'21, OPEC+ reached an agreement to boost oil output monthly by 400,000 bpd starting in August and until the remaining 5.8 mb/d of last year's cuts are unwound.

The market has been rapidly rebalancing, with all the Covid related increase in refined product inventories unwound.

# Near-term demand green shoots: vehicles are rolling.

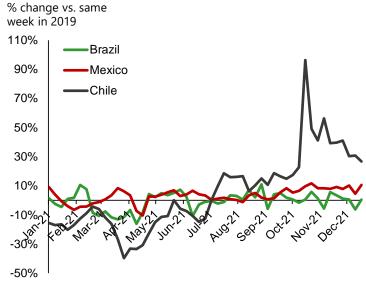

US interstate vehicle miles traveled S. Europe traffic performance vs. L. America traffic performance vs. (VMT) vs. same week of 2019<sup>1</sup>

same week of 2019<sup>2</sup>

same week of 2019<sup>2</sup>

- Vehicle miles driven in the US, Southern Europe and Latin America have returned to or overtaken pre-COVID levels, with an especially strong showing for trucks, driven also by the surge in online purchases.
- Individuals also seem to be driving their cars more often, to avoid public transportation.
- Similar trends are being witnessed in other countries, such as:
  - Japan, where an explosion for drivers-license applications signals a lasting shift to car travel;
  - Hong Kong, where traffic is already twice as congested as in 2019;
  - The streets of Tel-Aviv, Moscow and Bucharest, which are now all busier than they were before the pandemic, according to TomTom NV.

Vehicle miles driven in several large consuming regions, have been rising rapidly, spurring gasoline and diesel consumption.

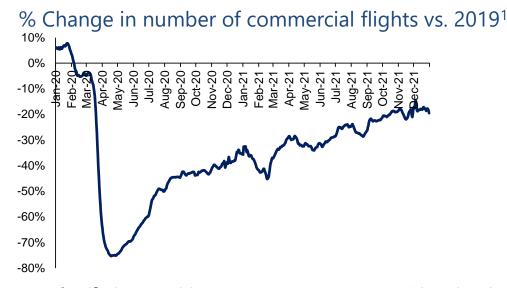

Source: Atlantia. Traffic for all vehicles

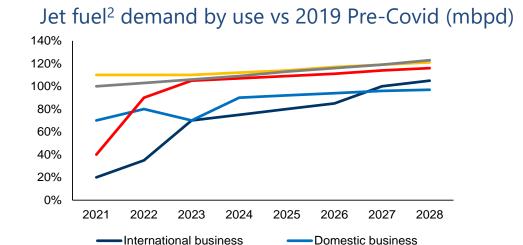

Source: US Department of Transportation, Federal Highway Administration, "Weekly Travel Volume Report": estimates the vehicle miles traveled (VMT) for interstate highways and how the total travel measured by VMT compares with travel that occurred in the same week of the previous year.

# Near-term demand green shoots: jet fuel recovery.

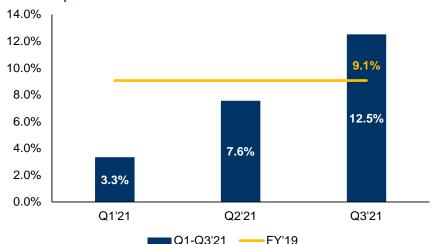

Jet fuel<sup>2</sup> demand by use vs 2019 Pre-Covid (mbpd) 10.0 8.3 7.9 8.0 6.0 2.0 2021 2022 2023 2024 2025 2026 2027 2028 International business Domestic business International leisure Domestic leisure 2019 Pre-Covid Freight

DIS' % of Jet Fuel transported on total volume (mt) transported for all commodities

Domestic leisure

International leisure

-Freight

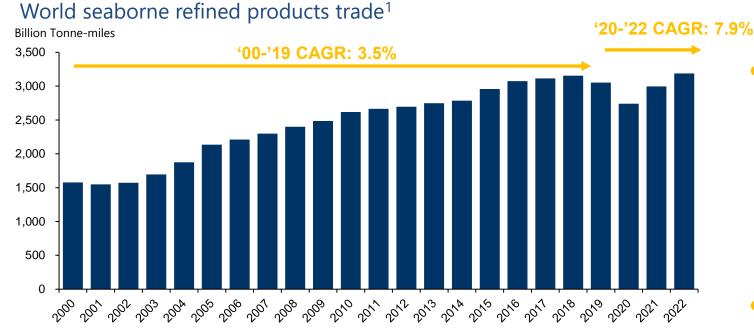

The number of commercial flights has been steadily increasing since June 2020, although currently still around 19% lower than in 2019. This upward trend is expected to continue and accelerate during '22, stimulating growth in jet-fuel consumption.

<sup>1.</sup> Source: www.flightradar24.com/data/statistics as of Jan'21

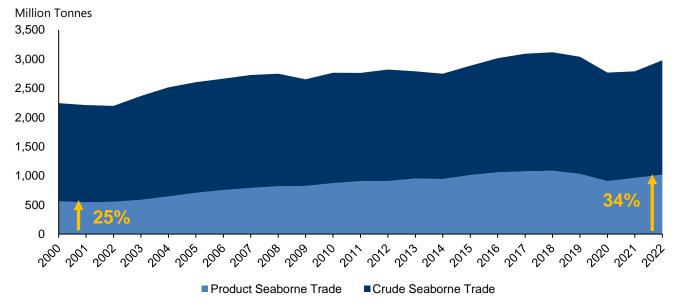

<sup>2.</sup> Source: Macquarie bank, October '21

# Longer-term demand: healthy and resilient growth.

#### Product share of Oil Seaborne trade<sup>1</sup>

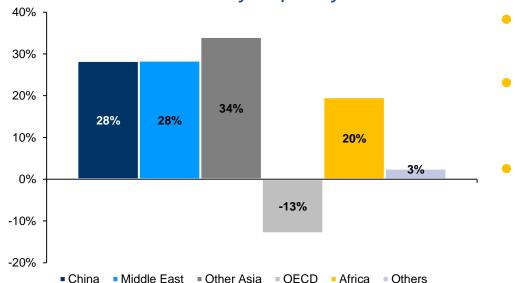

- Seaborne oil product trade demand has contracted in 2019 and fell sharply in 2020 before an expected sharp rebound in 2021 and 2022; it grew at a CAGR of 3.5% between 2000 and 2019 and is expected to grow at a CARG of 7.9% between 2020 and 2022.
- Furthermore, refineries are increasingly being built far from the main consuming areas, contributing to a rise in volumes transported by sea, and average distances sailed.
- Unsurprisingly, refined products have increased their share of the total oil seaborne trade from 25% in 2000 to 33% in 2020, with an expected share of 34% in 2021/2022.

# Longer-term demand: changes in the refinery landscape

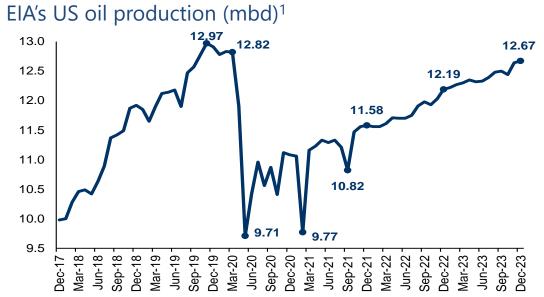

### Portion of net refinery capacity additions '21-'26

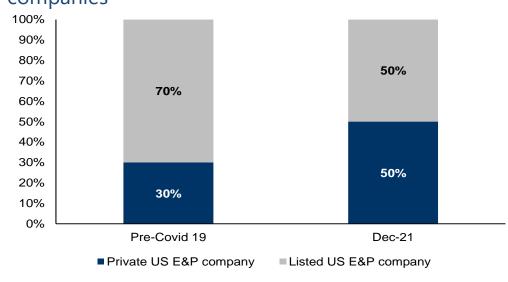

- Global refinery crude distillation capacity should rise by 4.8m b/d in the '21-26 period.
- ~91% of the planned refinery net capacity additions in the '21-'26 period are in Asia (of which +1.4m b/d in China) and the Middle East (+1.4m b/d).
  - The large increase in refining capacity in the Middle East is likely to be very beneficial for product tankers, since it should also entail long sailing distances, as a large portion of their output is likely to be exported to Asia.
- Older refineries in particular in Europe but also in other areas such Australia/New Zealand and the US have been suffering from poor margins and were destined for closure due to the planned ramp-up in capacity from more modern refineries in the Middle East and Asia. Covid-19 has accelerated this process with announcements of ~1.9 mbpd of confirmed capacity closures/conversions, of which ~60% is expected to have occurred in FY'21.
- The majority of these announcements have been driven by the oil majors rationalising their refining footprint across the world. In fact, ~40% of confirmed capacity closures/conversions is expected to occur in the US, ~11% in Europe and ~15% in Australia/New Zealand.
- An **additional ~0.6 mbpd of capacity closures is currently under assessment**, of which ~45% is expected to occur in Europe and ~55% in Australia/New Zealand.
- According to the IEA, over the next few years, Europe and all the regions of the southern hemisphere are expected to remain reliant on product imports from the United States, Russia, the Middle East and China.

# E-MARKET SDIR CERTIFIED

# Longer-term demand: US shale oil comeback

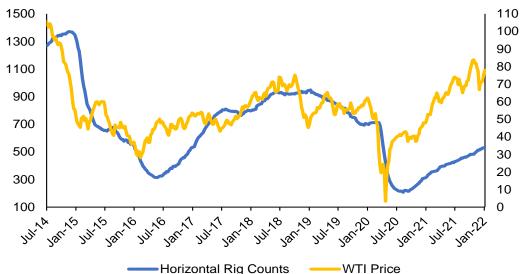

US rigs owned by private vs listed US E&P companies<sup>3</sup>

- Source: EIA as at Jan'22.
- 2. Source: Baker Hughes and EIA as at Jan'22.
- 3. Source: Kepler Cheuvreux as at Jan'22.

US horizontal oil rigs (lhs) vs WTI (US\$ bl, rhs)<sup>2</sup>

- The US rig count has been slowly but surely rising, recently surpassing the 600 level and driving a gradual increase in US oil output, which is expected to reach 12.2 mbd by the end of '22 and 12.7 mbd by the end of '23, only 0.3 mbd below the prepandemic highs.
- While the reinvestment ratio of listed companies has dropped sharply from 120% to 46% of their cash-flow, **private companies** have to a large extent compensated and now own 50% of the rigs relative to only 30% pre-COVID.
- Kepler<sup>3</sup> expects US E&P Capex to rise by 19% in '22.

Higher US oil production should drive longdistance crude exports and indirectly benefit product tankers.

# E-MARKET SDIR CERTIFIED

# Several forces spurring demolition.

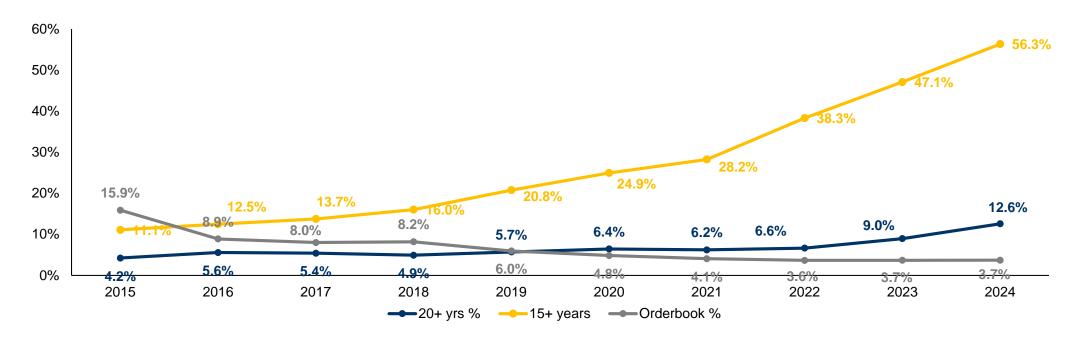

- The restocking phase following the pandemic, in addition to the important fiscal stimulus and infrastructural plans in several large economies is and should continue spurring demand for **iron ore and steel, including scrap steel, whose prices hit 10-year highs in 2021**. This is likely to encourage demolitions on the one hand and to discourage newbuilding orders, as construction prices rise, on the other hand.
- Demolitions are also likely to be stimulated by the new regulations requiring owners to measure their fleet's Carbon Intensity Indicator (CII) and Energy Efficiency Existing Ship Index (EEXI), as well as by the recently approved European emission trading scheme (ETS). Other regions and countries are studying and are likely to adopt similar schemes, forcing owners to pay for the emissions generated by their vessels.
- Furthermore, vessels that are more than 15 years old cannot call at certain terminals and several oil majors will not charter them, especially for long-term periods. In addition, several leading players recently signed the **Sea Cargo Charter** through which they commit to disclose the emissions of the vessels they charter, which should increase their preference for younger tonnage.
- The largest shipping banks have signed the Poseidon Principles through which they commit to reduce the CO2 footprint of the vessels they finance. **Bank financing for older vessels is therefore scarce** and usually either not available or much more expensive and at lower leverage ratios.
  - 1. Source: Clarksons Research India Scrap Price (Suezmax/Aframax Tanker) Jan'22.
  - 2. Source: Bloomberg, as at 5 Jan'22

# **Growing pool of demolition candidates.**

Historical and forecasted fleet composition by age (MRs and LR1s) (dwt, as at period end)

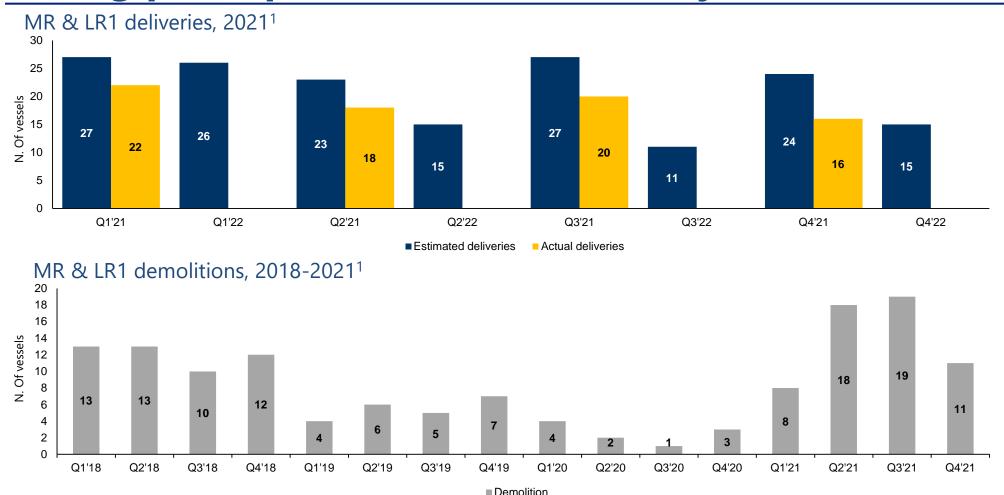

The proportion of vessels which have more than 15 and 20 years has been rising rapidly and this trend is expected to accelerate over the coming years as many of the vessels that were delivered during the last 2003-2008 super cycle cross these thresholds.

The rapidly ageing fleet, coupled with the many forces spurring demolition, should contribute to very limited fleet growth in the next few years.

# Strong pick-up in demolitions already visible.

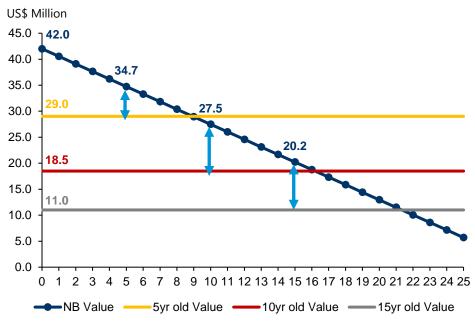

Recycling which was minimal in FY'20, since demolition yards were closed most of the time, has been rising rapidly over the last few quarters. If demolitions continue at the same pace as in the last three quarter of '21, an average of 16 MRs and LR1s per quarter, we could see negative fleet growth in the last nine months of this year.

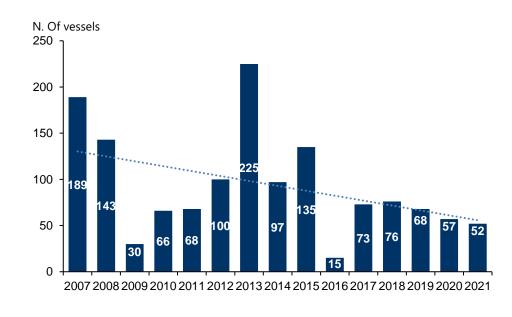

## Limited newbuild orders.

# MR Newbuilding parity curve vs second-hand values<sup>1</sup>

#### MR & LR1 orders

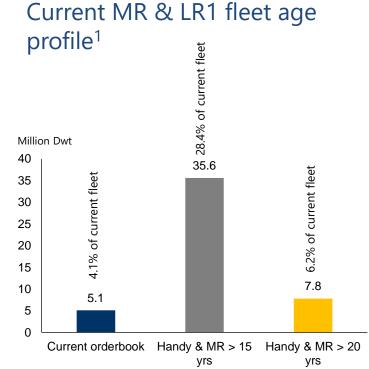

- Shipbuilding capacity has fallen sharply over the last few years, as yards were confronted with a dearth of orders.
- **Newbuild costs are rising** due to regulations and markedly higher steel prices.
- Second-hand values of even young eco-vessels are trading at a large discount to newbuilding parity.
- Furthermore, uncertainty regarding technological innovation to achieve the ambitious IMO/EU targets for reduction in CO<sup>2</sup> emissions, is reducing newbuilding orders.
- Lower interest in the sector from financial investors (Private Equity), and limited capacity for further investments by industrial players, which have already renewed their fleets and currently have stretched balance sheets, is also contributing to a drop in new construction contracts. In FY'21 only 52 MRs and LR1s were ordered, the second lowest number in the last 10 years.
- Yard availability for new deliveries in 2023 is severely constrained, due to a huge surge in container newbuild orders, in some of the same yards that build product tankers.

# E-MARKET SDIR CERTIFIED

# Slowing fleet growth.

MR & LR1 deliveries and scrapping (m dwt) (lhs), and net fleet growth (%)<sup>1</sup> (rhs)

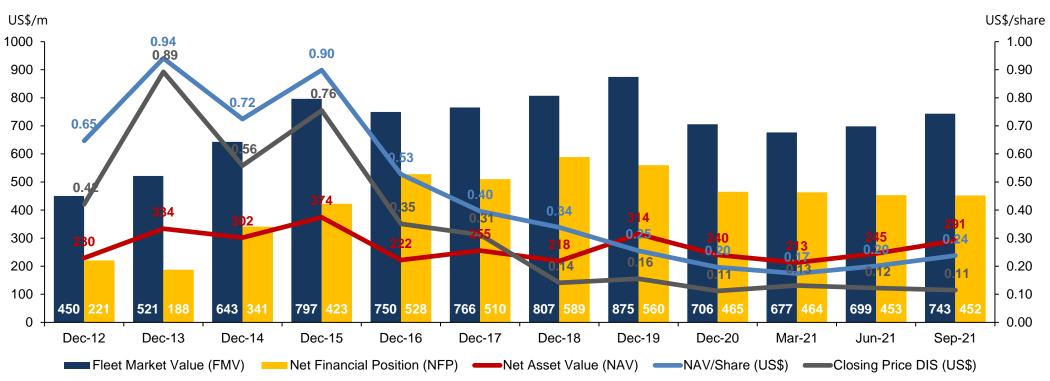

Scheduled deliveries are slowing, and the world fleet is aging. Even with limited scrapping, fleet growth is expected to be of only 1.2% in 2022 and 0.5% in 2023.

## **Historical NAV evolution.**

### DIS' Historical NAV evolution<sup>1</sup>

	Dec-12	Dec-13	Dec-14	Dec-15	Dec-16	Dec-17	Dec-18	Dec-19	Dec-20	Mar-21	Jun-21	Sep-21
Discount to NAV (End of Period)	35%	5%	23%	16%	34%	20%	58%	39%	43%	25%	39%	52%

As at 30 September 2021, DIS' NAV1 was estimated at US\$ 290.95m, its fleet market value at US\$ 743.3m<sup>2</sup>, and its closing stock price was 52% below its NAV/share.

DIS' owned and bareboat fleet market value according to a primary broker, less Net Debt, excluding the impact of IFRS 16. It includes the value of the leased assets for which DIS has a purchase obligation, less the discounted value of the financial payments on such leases. Fleet valued as at September 30, 2021.

# Why invest in DIS today.

- Young-fleet, most of which acquired at historically attractive prices and at top-tier yards. Furthermore, vessels are mostly eco-design (78% of owned and bareboat ships) and IMO classed (74% of owned and bareboat ships).
- First-class in-house technical management provides DIS access to long-term charters with demanding oil majors and allows it to anticipate and benefit from regulatory changes.
- Invested mostly in the MR1 and MR2, and more recently in the LR1, segments **these vessels** are the workhorses of the industry, since they **are the most flexible commercially and also the most liquid on the S&P market**.
- Prudent commercial strategy, always aiming to maintain between 40% and 60% of the fleet covered through longterm fixed-rate contracts over the following 12 months.
- International reach with chartering offices in 4 countries and 3 continents (Stamford, London, Singapore, and Dublin), allowing DIS to maintain close relationships with clients and brokers, increasing employment opportunities for vessels.
- Strong relationships with debt capital providers, including with the top European shipping banks and Japanese leasing investors.
- Attractive valuation of DIS in absolute terms NAV discount of 52% as at the end of September 2021 and relative to peers.
- The market has almost fully absorbed the excess inventories built-up during the spring of 2020; as oil demand and supply recover, returning to pre-COVID 19 levels, the sector should benefit from very attractive market fundamentals, driven also by a historically low orderbook.

## **DIS' CORE VALUES.**

### Long term vision

Guided by the values of family tradition, we build our success on long term planning and turning our promises into actions.

# Focus on the environment and safety

We do not compromise when it comes to environmental concerns. Care and attention, prudence and respect for the environment are qualities imbedded in our daily operation. We aspire to prevent any human injury, to avoid damage to the environment and we pursue a policy of zero incidents and zero spills at sea.

### Reliability

We strive to maintain a positive relationship, an open dialogue and a transparent way of doing business with all our stakeholders. Our ethical values are essential to the running of our business and an inspiring principle in the behaviour of our resources.

# Professional excellence

We reach excellence by encouraging our employees to be responsible, flexible and professional.

For that reason we prioritise the importance of developing their skills along professional growth.

# Passion and commitment

We are passionate about shipping and the people who make up the company. Success is achieved through encouraging involvement and commitment.

### Social responsibility

Our strong sense of social responsibility towards cultural, environmental and solidarity-related issues is an added value for our business and is valued highly by our stakeholders.

# Teambuilding and multiculturalism

As a global operator, at all levels of the organisation, we embrace the spirit of teamwork and multicultural integration, both in our offices and on board our vessels.

#### Identification

Our daily work and our success are characterised by a strong sense of belonging between the company and its staff.

# **DIS' ESG – Environment and Safety**

# DIS seeks to be an industry leader on environmental and safety issues:

- Among the first fleets worldwide compliant with Monitoring Reporting and Verification criteria for CO2 emissions.
- Since 2011 DIS has a fleet performance monitoring department to optimize vessel efficiency.
- Health and safety goal reached on board: 0 injuries in 2020.
- Environmental goal reached: 0 accidents and spills in 2020.
- Digitalization of onboard record books.
- Implementation of condition based maintenance, enabling it to achieve the highest level required by the TMSA 3.
- Environmental certification ISO 14001.
- Energy efficiency certification ISO 50001.
- Safety certification OHSAS 18001.
- Quality certification ISO 9001.

- First in Italy to obtain the prestigious RINA Best 4 Plus: compliance certification for main maritime standards in force.
- Selection of suppliers according to quality and environmental certifications.
- Approved by the main oil-majors for long-term period contracts, of up to 5 years.
- Participation with leading roles in international organizations, such as INTERTANKO.
- US\$ 755 million invested between 2012 and 2019 in 22 newbuilding Eco product tanker vessels (10 MRs, 6 Handys, 6 LR1s) all delivered between Q1'14 and Q4'19.
- 75% of DIS' owned and bareboat fleet is 'ECO' (industry average: 25.7%), as at December 31 2020.

## DIS' ESG – Environmental KPIs.

	2019	2020	Var % 19-20
CO2 emissions, total fleet			
CO2 ( tons) Scope 1	607,307	578,619	-4.7%
AER ( g C02/dwt tonne*miles)	6.74	6.44	-4.5%
EEDI/EEXI ( g Co2/dwt tonne*miles)	4.96	4.96	0.0%
EEOI ( g CO2/actual tonne*miles)	16.10	16.18	0.5%
SOx emissions, total fleet			
SOx (tons)	10,860	1,863	-82.9%
SOx x nautical Miles ( t SOx/miles)	0.0059	0.0010	-82.8%
SOx x transport Unit ( t SOx/t)	0.0007	0.0001	-82.8%
NOx emissions, total fleet			
NOx (tons)	11,058	10,525	-4.8%
NOx x nautical Miles ( t NOx/miles)	0.0060	0.0057	-4.6%
NOx x transport Unit ( t NOx/t)	0.0008	0.0007	-4.7%
Energy consumption, total fleet			
High Sulphur Heavy fuel Oil (tons)	159,380	5,273	-96.7%
Very Low Sulphur heavy fuel oil (tons)		139,833	
Marine gas oil (tons)	34,622	39,538	14.2%
Total energy consumption (TJ) <sup>1</sup>	7,933	7,635	-3.8%
% of fleet with installed water ballast treatment system	61.6%	85.3%	

DIS' fleet modernisation and constant focus on efficient fuel management has led to a significant improvement in emissions in 2020 relative to the previous year.

# **DIS' ESG – Corporate Governance**

DIS is listed on the most demanding segment of the Milan stock exchange (the Star), and has therefore adopted a first-class corporate governance framework:

- Listed on the Star segment of the Milan Stock Exchange since 2007;
- High standards of corporate governance:
  - Internal committees entirely composed by independent directors with a major influence on the Board of Directors' decisions;
  - Supervisory committee;
  - Constantly updated Code of Ethics and Organizational and Control Model;
  - Updated anticorruption policy;
  - Newly released whistleblowing policy;
  - Diversity policy;
  - · Internal auditor;
  - · Long-term incentive based remuneration scheme.

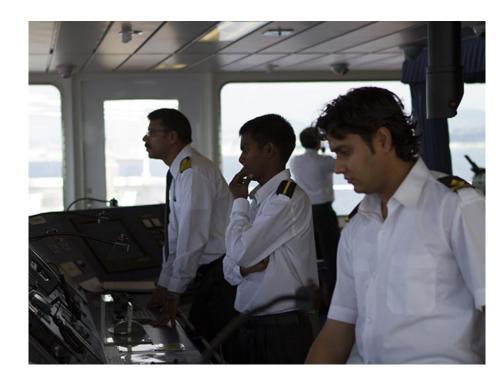

# E-MARKET SDIR CERTIFIED

# **DIS' ESG – Social responsibility**

# DIS seeks a diverse and inclusive work environment, where team work is highly valued. The high levels of employee satisfaction result in high retention rates.

- 24 onshore personnel as at 31 December 2020;
- 600 seagoing personnel as at 31 December 2020;
- 74% retention rate for onshore personnel in 2020;
- 91.15% retention rate for seagoing personnel in the period 2018-2020;
- Cultural diversity in workforce with 10 nationalities represented as at the end of 2020;
- Balanced gender mix with women representing 43.5% of our employees;
- 46.9 hours of training onshore and 10,640 hours of training offshore in 2020.

## IMO (MEPC 76): CII and EEXI.

In June 2021, **IMO's Marine Environment Protection Committee (MEPC 76)** adopted amendments to the International Convention for the Prevention of Pollution from Ships **(MARPOL) Annex VI** that will require ships to reduce their greenhouse gas emissions. These amendments combine technical and operational approaches to improve the energy efficiency of ships and are in line with the ambition of the Initial IMO GHG Strategy, which aims to reduce carbon intensity of international shipping by 40% by 2030, compared to 2008.

The new measures will require all ships to calculate their **Energy Efficiency Existing Ship Index (EEXI)** following technical means to improve their energy efficiency and to establish their **annual operational carbon intensity indicator (CII) and CII rating**. Carbon intensity links the GHG emissions to the **vessel deadweight** over distance travelled. These amendments are expected to enter into force on 1 November 2022, **with the requirements for EEXI and CII certification coming into effect from 1 January 2023**. A review clause requires the IMO to review the effectiveness of the implementation of the CII and EEXI requirements, by Jan 1 '26 at the latest, and, if necessary, develop and adopt further amendments.

- Attained Energy Efficiency Existing Ship Index (EEXI) indicates the energy efficiency of the ship compared to a baseline. Ships are required to meet a specific required EEXI, which is based on a required reduction factor (expressed as a percentage relative to the EEDI baseline). EEXI will be applicable from the first annual, intermediate or renewal IAPP survey after Jan 1 '23. Ships which do not have (PRE-EEDI) or have an insufficient attained EEDI to respect the new limits (20% compared with the baseline), will have to derate engines or improve their efficiency.
- Annual operational carbon intensity indicator (CII) and CII rating. The CII determines the annual reduction factor needed to ensure continuous improvement of the ship's operational carbon intensity within a specific rating level. The actual annual operational CII achieved would be required to be documented and verified against the required annual operational CII. The rating would be given on a scale operational carbon intensity rating A, B, C, D or E indicating a major superior, minor superior, moderate, minor inferior, or inferior performance level. The performance level would be recorded in the Ship Energy Efficiency Management Plan (SEEMP). A ship rated D or E for three consecutive years, would have to submit a corrective action plan, to show how the required index (C or above) would be achieved. Administrations, port authorities and other stakeholders as appropriate, are encouraged to provide incentives to ships rated as A or B. In order to reduce CII of international shipping by 40% by 2030, compared to 2008, the IMO has set the following reduction path for the entire world fleet up to 2026: 5% by 2023, 7% by 2024, 9% by 2025 and 11% by 2026.

### **EU Emission Trading System (ETS) and Fuel EU.**

The European Commission has recently published a set of legislative proposals to enable the EU to attain its 2030 target of reducing its greenhouse gas emissions by at least 55% by 2030 compared with 1990 levels. In particular, the EU Commission proposed to include shipping in the **EU Emissions Trading Scheme (ETS)**, the EU carbon market, and to impose greenhouse gas intensity requirements on shipping fuels, through the **Fuel EU Maritime**.

- The **EU ETS** works as a cap-and-trade scheme, in which companies buy emissions allowances, where one allowance equals 1 tonne of emitted CO2. After the end of the year, companies need to surrender enough allowances to cover their ships' emissions for that year. If they have more allowances than they need, they can sell them to other companies which require them or can keep them for next year. The EU Commission objective is to include shipping in the ETS starting from 2023, with a gradual introduction. In fact, an owner would have to pay only for 20% of a ship's emissions in 2023, 45% in 2024, 70% in 2025 and 100% from 2026. Such measures will target all vessels above 5000 gt, of any flag and for all voyages starting/ending in a European port, between two European ports and during port waiting time. Only 50% of CO2 emissions of voyages from/to Europe will be considered. Each shipping company will be assigned to a specific EU member state authority that will oversee their compliance. If a company does not surrender the right amount of allowances by April 30 of the following year, it will pay an extra €100 fine per tonne of CO2 equivalent it did not have allowances for. Companies that have not complied for two consecutive years could be denied entry to EU ports.
- **Fuel EU** will come into effect in 2025, with the goal of improving the GHG intensity of the marine fuels, promoting the use of natural, biofuel or low-carbon/emission fuels. The requirements would consider the GHG emissions a fuel generates throughout its lifecycle, from its production to its final consumption by the ship, not just its use by the ship. A baseline will be established, with an improvement relative to that baseline of 2% in 2025, which grow gradually every 5 years to reach 75% in 2050. The proposal also allows owners of different ships to pool vessels together to help each other with compliance (if one ship is over-compliant with the requirements of the previous year, while another is not, the first can transfer its excess credits to the second). Companies that are not compliant with the rules by May 1 of the following year will have to pay a penalty and the money would go into a green fuel fund.
