Genoa, February 10th, 2016

Network Rail Ferriby – Gilberdyke re-signalling scheme UK contract awarded to the consortium Ansaldo STS / Linbrooke Services Ltd

- **Ansaldo STS and Linbrooke Services Limited have been awarded the contract worth £34.5 million (£15.15 million for Ansaldo STS and £19.35 million for Linbrooke) relating to the re-signalling of the line with computer based interlocking technology.**
- **The CBI technology will be implemented to upgrade the 7 main stations served along the 35 miles between Ferriby and Gilberdyke.**

After its successive implementations on High Speed One and Cambrian Lines, Ansaldo STS's interlocking technology has been selected for the Network Rail project to re-signal and upgrade the line from Ferriby to Gilberdyke (county of North Humberside). The re-signalling contract has been awarded to the consortium of Ansaldo STS and Linbrooke Services Limited.

Within the scope of the contract, Ansaldo STS will lead the consortium and be responsible for the SEI CBI signalling system design and supply and the axle counter system design, supply and integration.

Linbrooke will deliver the signalling and power construction works, the telecommunications system design and construction and will be the overall UK Tester in Charge.

The project begins in February 2016 and is due to be commissioned in March 2018.

With this new and exciting project, the consortium is proud to support its partner Network Rail in the development of a more interoperable and sustainable railway network in the UK.
