FREMM “ANTONIO MARCEGLIA” DELIVERED TO THE ITALIAN NAVY

Trieste, April 16, 2019 – The frigate “Antonio Marceglia” was delivered today to the Italian Navy at Fincantieri’s shipyard in Muggiano (La Spezia). It is the eighth of a series of 10 vessels of the FREMM program – Multi Mission European Frigates – commissioned to Fincantieri as part of the international Italian-French program, coordinated by OCCAR (the Organisation for Joint Armament Cooperation). Orizzonte Sistemi Navali (51% Fincantieri and 49% Leonardo) is the prime contractor for Italy in the FREMM program, which envisions the construction of 10 units, all already ordered.

“Antonio Marceglia” is the eighth unit built by Fincantieri that includes the combat system, the fourth in multipurpose configuration after the “Carlo Bergamini”, the “Luigi Rizzo” and the “Federico Martinengo”, delivered to the Italian Navy respectively in 2013, 2017 and 2018. Measuring 144 meters of length and with a displacement at full load of approximately 6,700 tons, the FREMM frigates represent technological excellence: designed to reach a maximum speed of 27 knots and to provide accommodation for 200 people (crew and staff), these vessels are able to always guarantee a high degree of flexibility and to operate in a wide range of scenarios and tactical situations.

The FREMM program, representing the Italian and European defence state of the art, stems from the renewal need of the Italian Navy “Lupo” class (already decommissioned) and “Maestrale” class (some of them already decommissioned, the remaining close to the attainment of operational limit) frigates, both built by Fincantieri starting from the 1970s.

These units – which will become the backbone of the naval fleet over the next decades – significantly contribute to the development of the tasks assigned to the Italian Navy, being able to operate in various sectors, from specific military purposes to those in favor of the community.

Fincantieri is one of the world’s largest shipbuilding groups and number one for diversification and innovation. It is leader in cruise ship design and construction and a reference player in all high-tech shipbuilding industry sectors, from naval to offshore vessels, from high-complexity special vessels and ferries to mega yachts, as well as in ship repairs and conversions, production of systems and mechanical and electrical component equipment and after-sales services.

With over 230 years of history and more than 7,000 vessels built, Fincantieri has always kept its management offices, as well as all the engineering and production skills, in Italy. With over 8,600 employees in Italy and a supplier network that employs nearly 50,000 people, Fincantieri has enhanced a fragmented production capacity over several shipyards into a strength, acquiring the widest portfolio of clients and products in the cruise segment. To hold its own in relation to competition and assert itself at global level, Fincantieri has broadened its product portfolio becoming world leader in the sectors in which it operates.

With globalization, the Group has around 20 shipyards in 4 continents, over 19,000 employees and is the leading Western shipbuilder. It has among its clients the world's major cruise operators, the Italian and the US Navy, in addition to several foreign navies, and it is partner of some of the main European defense companies within supranational programs.

Fincantieri's business is widely diversified by end markets, geographical exposure and by client base, with revenue mainly generated from cruise ship, naval and offshore vessel construction. Compared with less diversified players, such diversification allows it to mitigate the effects of any fluctuations in demand on the end markets served.
