Revenues – ECONYL® – BCF the support and NTF the accelerator

 - BCF sector historically drove ECONYL® development due to cultural sensitiveness on environmental topics of Aquafil and important carpet producer customers;
 - ECONYL® allowed to protect and even increase market share, especially on high-end products
 - Later on in NTF sector, both ECONYL® application developments and an increasing awareness to a “circularity vision” allowed Group to attract brand new and different customers (e.g. fashion and luxury brands)

Outlook

The current geographical scenario requires a distinct reading of the evolution of the various geographical areas in which the Group operates.

In EMEA, raw materials and energy costs continue to rise sharply. The Aquafil Group remains committed to implementing all price adjustment and cost containment measures that may allow unit margins to be maintained. The current cost level is already yielding a slowdown of end demand in all the various product areas.

In the other two geographical areas, energy costs are not following the same trend as in Europe. In Asia Oceania, the market is showing sound demand levels with a partial recovery of the residential market and an excellent performance by the Japanese market.

In the United States, demand continues to rise sharply, following on the increase in the first half of the year.

In this scenario, the Group expects less brilliant results in the second half of the year than in the first. In any event, profitability for full-year 2022 is expected to be higher than in 2021. All this is due to the competitive advantage that the market attributes to ECONYL® branded products, as well as to the different geographical distribution of the Group's markets.
