### About Technoprobe

Technoprobe is a leading company in the field of semiconductors and microelectronics. Established in 1996 by the entrepreneurial spirit of its founder Giuseppe Crippa, Technoprobe specialises in the design and manufacture of electro-mechanical interfaces called "Probe Cards" for testing the operation of chips. Its segment is that of non-memory or SOC (system on chip) semiconductor testing.

The Group is the only Italian manufacturer of probe cards and the second largest in the world in terms of volume and turnover. Its portfolio of collaborations and partnerships includes some of the largest microelectronics, IT and digital companies in the world. Probe cards are hi-tech devices - tailored to the specific chip - that allow testing the operation of chips during their construction process. They are highly technological interfaces that ensure the operation and reliability of devices that play a crucial role in the industries of Information Technology, 5G, Internet of Things, home automation, automotive, aerospace, etc. Technoprobe is therefore an essential link in the supply chain for the production of chips that are at the heart of today's technological world.

Technoprobe is an ever-expanding technology hub of research and innovation with about 2,500 consolidated employees (of which more than 1,517 are in Italy), 3 research centres and more than 500 certified patents.

The Group has its Italian headquarters in Cernusco Lombardone (LC), a municipality on the outskirts of Milan where there is also a production plant that covers an area of about 18,000 sqm. The Group has two additional production plants in Italy: one in Agrate (MB) covering about 3,000 sqm, and one in Osnago (LC) covering about 5,000 sqm. The Group also has 11 other locations spread across Europe (France and Germany), Asia (Taiwan, South Korea, China, Japan, Philippines and Singapore) and the United States (two locations in California).
