COMPANY PROFILE

Sabaf Group: product range evolution in 4 Business Units

SINCE 1950

GAS

- Standard Burners
- Special Burners
- Professional Burners
- Oven and Grill Burners
- Gas Valves
- Gas Oven Thermostats
- Microswitches & Accessories

SINCE 2018

ELECTRONICS

- Cooker Hoods
- Ovens
- Cookers and hobs
- Vitroceramic hobs control cards
- Refrigerators/freezers
- Other products

SINCE 2000, further expansion since 2019

HINGES

- Ovens
- Dishwashers
- Washing machines
- Refrigerators
- Special applications
- Small compartments
- Catering appliances

SINCE 2022

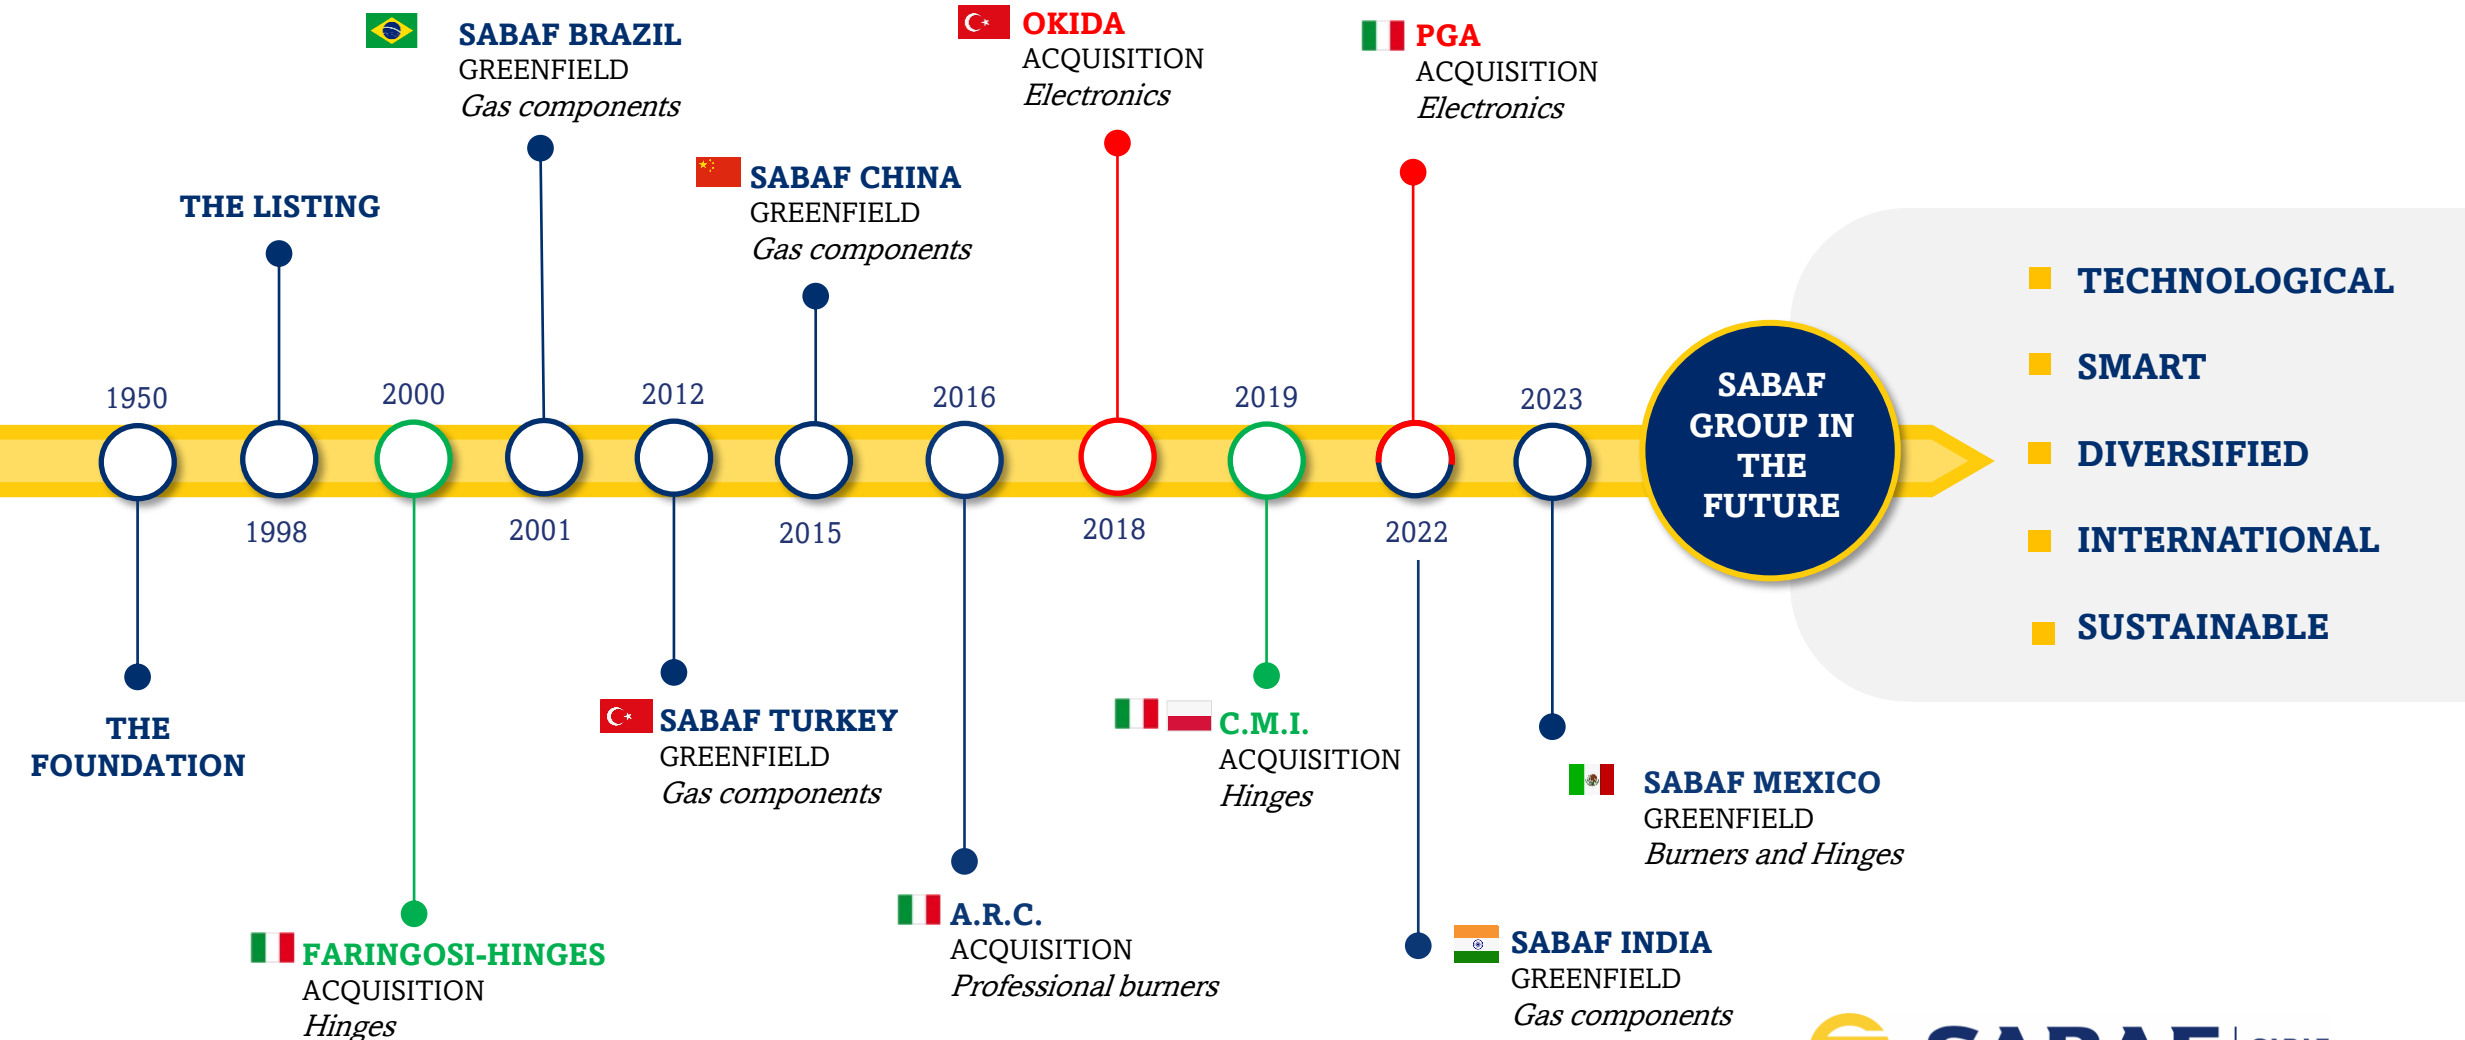

INDUCTION

Components for induction cookers and hobs

- Inductor
- Power board
- Cooling system
- Touch control
- User interface

Sabaf Group: evolution

Sabaf Group: Revenues and EBITDA last 4 years

REVENUES

FY 2022 Revenues at € 253.1 mn

+ 68.9%

2022 STRATEGIC MOVES

Strategic moves (becoming in facts)

SABAF INDUCTION

Sales start: 3Q 2023

P.G.A. ACQUISITION

October 2022

SABAF INDIA

Start of production: 3Q 2022

SABAF MEXICO

Start of production: 2Q 2023

Sabaf Induction: business strategy

2022

The Sabaf Group enters the
INDUCTION COOKING SECTOR

1

The Sabaf Group aims to become a **key player** in the large **induction cooking** market

2

Through this strategic investment Sabaf intends to turn out as **leader and innovator** not only in the mechanical sector, but also in electronics and new technologies

3

The inclusion of induction technology will lead the Group to be one of the few players able to **fully cover all the three cooking surface technologies** (gas, radiant and induction)

4

Sabaf aims to carry on along the **sustainable growth** path in the respect of the environment

5

This project will push Sabaf to a further **evolution** and **deep transformation** in the next few years

Sabaf Induction: business strategy

MARKET

The European market of induction cooking components, estimated at around €500 million

- **Steady growth** for several years at a rate of over 10%
- Highly **concentrated market** with few players (Technological complexity)

PROJECT

Investment plan

- About **€5 million** in R&D in the period 2021 – 2023
- Setting up of a **dedicated project team** in Italy

R&D

- Sabaf has developed **its own project know-how** internally by filing proprietary patents, software and hardware
- Creation of **innovative products** which better meet manufacturers' needs and new consumer trends
- The Group benefits from the expertise gained from the acquisitions of **Okida and P.G.A.** where part of the induction cooking components will be produced
- Team of **more than 60 electronic engineers**

The project technological flexibility will enable Sabaf to offer to its clients **customised products**

Sabaf Induction: business strategy

- **5 product platforms** which cover the whole market (high, medium and basic range) with customisation opportunities
- The first **prototypes** were released in **September 2022**
- **Production** will start by the **third quarter of 2023**
- Sabaf **network** for **sales** and distribution
- **Very positive customer feedback** (**agreements** with some important players have been already **signed**)
- Objective: at least **5% of the non-captive European market** by 2025, further expansion in the following years

P.G.A. acquisition

The company

- **P.G.A. S.r.l.** is based in **Fabriano** (AN)
- Owned by brothers **Andrea and Paolo Cennimo**, each of whom held 50% of the capital
- Operating for over 25 years in the field of design and assembly of **electronic control boards** for the household appliances sector
- Holds 100% of the share capital of **PGA2.0 s.r.l.**, a business unit dedicated to the design and prototyping of innovative solutions based on interconnection and the Internet of Things

The numbers

- 2022 **SALES: €12.2 million**
- 2022 **EBITDA: €2.6 million**
- **Net financial debt** at 31 December 2022: €0.8 million
- **48 employees**

P.G.A. acquisition

The acquisition

- **100%** of the share capital
- **Preliminary valuation** amounting to **€9.76 million** → **5x EBITDA** (average annual consolidated 2020 – 2022)
- The **purchase price** will be determined on the basis of the final P.G.A. Group **2022 EBITDA** and of the **net financial position** at the date of completion of the transaction
 - 75% paid in a single payment
 - 25% paid through the sale of Sabaf treasury shares
- Possible further price adjustment ("**earn-out**"), linked to the achievement of the Sabaf Group Electronics Division objectives
- Andrea and Paolo Cennimo remain at the head of P.G.A. as Chief Executive Officers

The strategy

- The acquisition of P.G.A. reflects the aim of **diversification and expansion** of the offer defined in our Business Plan
- P.G.A. **integrates perfectly with Okida**, the Sabaf Group's company which is already active in the electronics sector and which is increasingly contributing to the Group's results
- The **Electronics Division plays a decisive role** in Sabaf's strategic development into a group with a full-fledged presence in advanced technologies in the household appliance industry → Electronics allows to reach **diversified future expansions** and **higher profitability level**
- Through this acquisition the **2023 Electronic division turnover** is expected to be around **€35 million**

Widening Industrial Footprint

SABAF INDIA

- **Production:** valves and burners for local market and potential export
- **Investments:** € 5.2 mn in 3 years
- **Plot area:** 24,000 sqm (built-up area 5,000 sqm)
- **Expected capacity:** € 6 mn
- **Start of production:** 3Q 2022
- **Good outlook for growth in 2023**

SABAF MEXICO

- **Production:** burners for North and Central America markets
- **Investments:** € 6 mn in 3 years
- **Plot area:** 23,300 sqm (built-up area 12,950 sqm)
- **Expected capacity:** € 11 mn already fully booked
- **Start of production:** 2Q 2023

FINANCIAL PERFORMANCE

Performance data

Income statement – 12 months 2022 vs. 12 months 2021

€ x 000	12 MONTHS 2022		12 MONTHS 2021		Δ % 22 - 21
Revenue	253.053	100,0%	263.259	100,0%	-3,9%
Other income	10.188	4,0%	8.661	3,3%	
Total operating revenue and income	263.241		271.920		
Consumption	(124.844)	(49,3%)	(112.433)	(42,7%)	
Personnel costs	(49.926)	(19,7%)	(53.964)	(20,5%)	
Other operating costs	(48.379)	(19,1%)	(51.383)	(19,5%)	
EBITDA	40.092	15,8%	54.140	20,6%	-25,9%
Depreciation	(18.267)	(7,2%)	(16.869)	(6,4%)	
Gains/losses on fixed assets	251	0,1%	237	0,1%	
Write-downs/write-backs of non-current assets	(189)	(0,1%)	-	0,0%	
EBIT	21.887	8,6%	37.508	14,2%	-41,6%
Net financial expense	(92)	(0,0%)	(429)	(0,2%)	
Revenues (expenses from hyperinflation)	(9.023)	(3,6%)			
Exchange rate gains and losses	(515)	(0,2%)	(7.399)	(2,8%)	
Profits and losses from equity investments	(48)	(0,0%)	-	0,0%	
EBT	12.209	4,8%	29.680	11,3%	-58,9%
Income taxes	3.040	1,2%	(4.997)	(1,9%)	
PROFIT FOR THE YEAR	15.249	6,0%	24.683	9,4%	-38,2%
Minority interests	-	0,0%	780	0,3%	
PROFIT ATTRIBUTABLE TO THE GROUP	15.249	6,0%	23.903	9,1%	-36,2%

II half 2022 highlights and 2023 trend

II HALF 2022 HIGHLIGHTS

Positives

- **STRONG CASH GENERATION**
- **WORKING CAPITAL IMPROVEMENT**
- **PRICE INCREASE**
- **FOREIGN EXCHANGE RATE EFFECT**

Negatives

- **DROP IN VOLUMES:**
Causes: market slowdown after two years of strong growth, inflation, *destocking*.
- **INCREASE IN ENERGY COSTS**
- **INCREASE IN RAW MATERIAL COSTS**

TREND 2023

- **VOLUMES:**
 - End of destocking
 - Incoming orders back to normal
 - 1H 23 market demand better than 2H 22 even if the visibility is low
- **ENERGY COSTS:** current prices substantially below 2022 average level
- **RAW MATERIAL COSTS:** price gradually decreasing

Performance data

Financial indicators

	12 MONTHS 2022	12 MONTHS 2021
Change in turnover (vs. previous year)	-3.9% <i>vs. 12m 2021</i>	+42.4% <i>vs. 12m 20</i>
Change in turnover (like-for-like basis)	-4.9% <i>vs. 12m 2021</i>	-
ROCE (return on capital employed)	9.10%	19.7%
Net debt/EBITDA	2.10	1.25
Net working capital/Turnover	31.4%	26.1%
Net debt/equity	54.0%	55.2%
Days of Sales Outstanding	84	101
Days of Payables Outstanding	82	96
Days of Inventory Outstanding	104	99

2023 Outlook

- ▶ In the first quarter of 2023
 - **demand** has normalised
 - **energy prices** have fallen sharply
 - **commodity** prices are gradually trending towards lower average levels than in 2022
- ▶ The **destocking** that characterized the second half of last year is now over
- ▶ **Sales in the first half of 2023**, while not reaching the records of early 2022, are expected to be **higher in the second half of 2022**

These factors, combined with:

- a **very positive market response for induction** cooking components
- the **contribution of the new production plants** in India and Mexico and
- **the integration of P.G.A.** (acquired in 2022) into the Electronics Division

lead us to expect a **year of progressive and substantial recovery.**

The implementation of the Business Plan, including the **acceleration of growth through acquisitions**, continues as planned.

The Board of Directors will propose to the shareholders to allocate the profit for the year of €2,246,997 entirely to the Extraordinary Reserve, in order to keep within the Group the financial resources needed to accelerate the path of growth and to be able to take advantage of opportunities even in the short term, consistently with the goals of the Business Plan.

SUSTAINABILITY

Sabaf: a sustainable business

Sustainability in the Business plan 2021 - 2023

“ Sabaf’s strategy and governance model are aimed towards ensuring long-term sustainable growth.

For Sabaf, sustainability is primarily based on sharing values with its stakeholders; compliance with common values increases mutual trust and encourages knowledge development ”

Sabaf: a sustainable business

KPI measurement

	KPI	Unit of measurement	2023 Target vs. 2020	2020 ACTUAL	2021 TARGET	2021 ACTUAL	12M 2022 ACTUAL	2022 TARGET	2023 TARGET
1	CO ₂ emissions/Revenue	tCO _{2eq} / million of Euro	-14%	132	<128	111	91	<120	<114
2	Hours of training per capita	h	+40%	13.9	>11.0	20.4	25.7	>13	>15
3	Summary indicator of injuries	-	-44%	177	<140	327	106.8	<120	<100

NOTES

- KPI 1 **CO₂ emissions/Revenue** = CO₂ emissions scope 1 + scope 2 market-based / Revenue
- KPI 3 **Summary indicator of injuries** = injury rate x injury lost day rate x 100
 - injury rate = number of injuries x 1,000,000/total hour worked
 - injury lost day rate = days of absence x 1,000/hours worked

ESG Performance - Corporate Governance

Remuneration policy

Linked to the economic-financial and sustainability objectives set out in the **2021-2023 Business plan**

- Definition of **SUSTAINABILITY OBJECTIVES:**
- With reference to the issues highlighted in the **materiality analysis**
 - Fully in line with **best practices** and **Corporate Governance Code**

MATERIAL TOPIC	KPI	IMPACT ON THE LTI PLAN
Emissions into the atmosphere	CO ₂ emissions scope 1 + scope 2 market based/Revenue	15%
Development of resources and skills	Hours of training per capita (by collaborator)	5%
Health and safety of personnel	Summary indicator of injuries (injury rate x injury lost da rate x 100)	5%
Impact of sustainability objectives on total LTI		25%

ESG Performance - Environment

CO₂ Emissions for the production of electric power (2019 energy mix)

	EMISSIONS		ENERGY SOURCE	
	g CO _{2eq} /kWh	Renewable	Fossil	Nuclear
Italy	315	33%	67%	-
France	56	19%	11%	70%
Europe	298	29%	50%	21%
US	374	16%	64%	20%
China	609	26%	70%	4%
India	684	18%	79%	3%
World	521	24%	65%	11%

Source: Terna International comparison

ESG Performance - Environment

CO₂ Emissions of gas hobs vs. induction hobs in Italy (from Journal of Cleaner production)

Scenario:

- preparation of a complete homemade meal (lunch)
- five (5) times per week
- for 20 years
- consumed by a four-member family **in Italy**

At the present time, **gas hobs are still more efficient** in term of environmental impacts

The energy generation grid mix largely affects the results: **only when energy sources will include a higher rate of renewables** (photo- voltaic, wind power, cogeneration, etc.) **the induction cooking technology will be environmentally friendly**

Journal of Cleaner production

Article «Comparative life cycle assessment of cooking appliances in Italian kitchens»

Claudio Favi ^a, Michele Germani ^b, Daniele Landi ^b, Marco Mengarelli ^c, Marta Rossi ^b

^a Università degli Studi di Parma ^b Università Politecnica delle Marche ^c Energy Research Institute, Nanyang Technological University

ESG Performance - Environment

CO₂ Emissions of gas hobs vs. electric induction hobs

- Gas hob emission 1,050 / induction hob emission 1,590 = 1.51
- CO₂ emissions Break-Even Point Gas vs. Induction is:
 $315 / 1.51 = 208 \text{ g CO}_{2\text{eq}}/\text{kWh} \rightarrow$ equivalent to ~70% of electric power generated by renewable energy sources

A necessary condition for an induction hob to generate lower CO₂ emissions than a gas hob is that the electricity is produced with a % of **renewable sources** (or nuclear energy) **greater than 70%**.

Countries that have less than 70% renewable energy pollute more if they use electric induction hobs than gas.

ESG Performance - Environment

High efficiency burners

More than 23% of burners produced are high efficiency burners
Energy efficiency > 60% (Increasing efficiency year by year)

Hydrogen: project Hy4Heat

**Sabaf strategic partner
in the Hy4Heat Project
with zero Co2 emissions
in cooking appliances**

The Hy4Heat project aims to establish whether it is technically possible, safe and convenient to **replace natural gas (methane) with 100% hydrogen** in residential and commercial buildings and gas appliances. The Hy4Heat project is financed by BEIS, (the UK governments Department for Business, Energy, and Industrial Strategy) and involves ten separate work packages

The SABAF Group, **through its subsidiary ARC**, is involved in Work Package 4, which covers cooking and heating appliances. ARC has developed and produced the burners that have now been specified on the **world's first UKCA Certified ranges of 100% hydrogen hobs and cookers**. These have been installed on the cooking appliances Glen Dimpex at HyHome, two purpose built houses demonstrating hydrogen appliances in a 'real life' scenario at Low Thornley, near Gateshead in the North of England

Immediately following the Hy4Heat project, cooking appliances incorporating ARC burners will be specified for the Community Trial involving **300 homes commencing in 2022**. Beyond the Community Trial, the UK Government intends to commission a '**Village Trial**' with **around 2,500 homes** in 2025 and a '**Town Trial**' (**10,000 homes**) in the latter part of the decade prior to potentially converting the whole UK gas grid to hydrogen over future years

ARC is involved also in Work Package 5B (Commercial hydrogen gas appliance development) which , includes commercial catering equipment where ARC has developed commercial hob burners for Falcon Foodservice Equipment Ltd

DISCLAIMER

Certain information included in this document is forward looking and is subject to important risks and uncertainties that could cause actual results to differ materially.

The Company's business is in the domestic appliance industry, with special reference to the gas cooking sector, and its outlook is predominantly based on its interpretation of what it considers to be the key economic factors affecting this business. Forward-looking statements with regard to the Group's business involve a number of important factors that are subject to change, including: the many interrelated factors that affect consumer confidence and worldwide demand for durable goods; general economic conditions in the Group's markets; actions of competitors; commodity prices; interest rates and currency exchange rates; political and civil unrest; and other risks and uncertainties.

Pursuant to Article 154/2, paragraph 2 of the Italian Consolidated Finance Act (Testo Unico della Finanza), the company's Financial Reporting Officer Gianluca Beschi declares that the financial disclosure contained in this financial presentation corresponds to the company's records, books and accounting entries.
