Final comments and outlook

Looking forward we highlight two different trends:

- Metering is riding a positive cycle leveraging competitive position and product portfolio
- Heating is suffering weak demand in end-market due to confusing regulation, incentives cancellation, high inflation and interest rate impact on household spending. Value chain is still overloaded with excess stock, de-stocking will take longer than expected

FY 2023 outlook

- Smart Gas Metering will maintain high double-digit growth thanks to key projects with domestic top clients
- Water Metering will grow between 10%-15% partially recovering the Q2 delay
- Heating & Ventilation: the typical seasonality of sales will not take place in the remaining part of 2023 in which a further slowdown is expected
- At consolidated level sales forecasts are expected to be further reduced compared to H1 results
- Cost reduction activities already in place with main structural effects expected from the beginning 2024
- EBITDA adjusted margin forecasted below double digit
- Net debt expected in line with reported H1 level

Future developments

- Management is working on a series of projects to accelerate internationalization and value generation, redesigning business portfolio targeting growth segments and cash generation potential
